SUMMARY

Final-year B.E. student in Artificial Intelligence and Data Science with a foundation in Java, Python, C, SQL, and Git/GitHub. Interested in AI, Machine Learning, and software development, with a focus on building practical solutions to real-world problems. Quick learner committed to continuously developing technical skills.

EDUCATION

K. S. School of Engineering and Management

Bachelor of Engineering in Artificial Intelligence & Data Science | CGPA: 8.25/10

Bengaluru, India

Expected 2027

TECHNICAL SKILLS

Languages: Java, Python, C, SQL

Libraries/Tools: NumPy, Pandas, Matplotlib, Seaborn, scikit-learn, Gymnasium, Stable-Baselines3

Web: HTML, CSS, JavaScript

Databases: MySQL, MongoDB

Developer Tools: Git, GitHub, Git Bash, VS Code, Antigravity

PROJECTS

Automated Invoice & Tax Discrepancy Detector | *Python, Pandas, Streamlit*

[View on GitHub](#)

- Built a data processing pipeline using Pandas to parse CSV files and verify actual mathematical totals against claimed vendor amounts
- Designed an interactive Streamlit web dashboard allowing non-technical users to seamlessly upload and analyze raw billing data
- Implemented automated filtering logic to isolate and highlight exact mathematical errors, significantly reducing manual auditing time

Medical Bill Pricing Anomaly Inspector | *Python, Pandas, scikit-learn, Streamlit*

[View on GitHub](#)

- Trained an Isolation Forest machine learning model using Scikit-Learn to autonomously detect pricing anomalies in complex datasets
- Developed a Streamlit user interface featuring a file uploader for quick comparisons between personal bills and baseline regional costs
- Engineered a side-by-side diagnostic table that visually isolates and highlights highly inflated line items for the user

Privacy Policy “Dark Pattern” Auditor | *Python, scikit-learn, BeautifulSoup, Streamlit*

[View on GitHub](#)

- Engineered a web scraper using BeautifulSoup to extract raw paragraph text directly from live privacy policy URLs
- Trained a custom text classification pipeline using Scikit-Learn to identify predatory legal phrasing and evaluate privacy risks
- Integrated the machine learning model with a Streamlit frontend to generate a dynamic, color-coded report highlighting sketchy clauses

Intelligent Support Ticket Routing API | *Python, Flask, scikit-learn, SQLite*

[View on GitHub](#)

- Trained a Naive Bayes text classifier to process unstructured customer complaints and accurately predict the required department
- Deployed the machine learning model via a Flask REST API to accept JSON payloads and return real-time routing decisions to client applications
- Integrated a local SQLite database to securely log incoming tickets and track model predictions for persistent auditing
